Work-authorised, no sponsorship required | Open to relocation | Full-time from Oct 2026

Summary

Information Technology graduate (B.Tech, GPA 8.76/10) completing a Business Management & Cyber Security MSc in September 2026. Works hands-on with the open-source detection and response stack: Zeek sensors and endpoint agents streaming through Apache Kafka into a Wazuh/OpenSearch indexer, enriched with MISP threat intelligence and automated in Python. Hardened Ubuntu servers against the CIS Benchmark, secured a k3s cluster with RBAC and network policies, and reviewed security posture across AWS, Google Cloud Platform and Oracle Cloud. Microsoft certified in security, compliance and identity fundamentals (SC-900), with the SC-200 Security Operations Analyst certification in progress. Trained 4,500+ students on acceptable-use and access-control requirements at a 95%+ certification pass rate, hunted threats across 50+ cryptocurrency platforms, and authored control documentation mapped to ISO 27001, BSI IT-Grundschutz and NIS2. Speaker and panellist on non-human identity governance at KuppingerCole's AIdentity & Non-Human Identity Impact Day, Munich, 6 October 2026. English C1, German A2.

Professional Experience

Cybersecurity Instructor, Level 1 (Full-time) **Apr 2024 - Oct 2025**
NIIT Foundation *Ahmedabad, India*

- Rebuilt the security curriculum around ISO 27001, SOC, SIEM, GRC and NIST CSF, explaining each control in everyday language, and raised awareness scores 30%.
- Trained 4,500+ students on acceptable-use and access-control rules, staying patient with beginners, and 95%+ passed the certification exam.
- Ran 40+ hands-on lab sessions on VAPT tooling, vulnerability assessment and security controls by walking people through each exercise on live systems.
- Wrote policy and control documents in plain language that non-technical staff could follow, cutting audit preparation by 10 hours per audit.
- Introduced AI-assisted security tooling into the curriculum, lifting student understanding of modern practice by 90%.

Cybersecurity Research Analyst (Full-time) **Jul 2023 - Mar 2024**
The CyberDiplomat *Bengaluru, India*

- Investigated threats across 50+ cryptocurrency platforms and wrote the findings up for managers with no security background, prompting a client risk-programme overhaul.
- Guided 3 junior analysts through first investigations with weekly reviews and written feedback, cutting onboarding time 25%.
- Documented each vulnerability with clear reproduction steps and kept the team informed during incidents, cutting average response time by 3 hours.

Education

GISMA University of Applied Sciences **Sep 2025 - Sep 2026**
MSc, Business Management & Cyber Security *Potsdam, Germany*

- Dissertation on non-human identity governance across eight security and AI-governance instruments, with a public experimental implementation; accepted as a conference talk (see Speaking & Publications).

Swarnim Startup and Innovation University **Aug 2020 - Jun 2024**
B.Tech, Information Technology *Gandhinagar, India*

- GPA 8.76/10 (German equivalent 1.6).
- Computer Science core coursework: operating systems, computer networks, database systems, programming, information security.

Skills

Security Operations & Incident Detection: Zeek, Apache Kafka, Wazuh/OpenSearch, MISP, detection rule authoring and tuning, file integrity monitoring, log pipeline design, Security Information and Event Management (SIEM) alert triage, incident documentation, remediation tracking, MITRE ATT&CK, Microsoft Sentinel and Defender XDR (SC-200 syllabus), KQL, Splunk, IBM QRadar and Google Chronicle (all three basic hands-on via employer training: console navigation, search, alert review)

Operating Systems & Systems Administration: Linux/UNIX (Ubuntu, Debian) administration and maintenance, CIS Benchmark hardening, auditd, SSH and PAM configuration, systemd services, virtualisation (VirtualBox, KVM), databases (SQL)
Cloud Services Security & Containers: AWS (IAM, CloudTrail, GuardDuty, S3 bucket policy), Google Cloud Platform, Oracle Cloud, Google Workspace and Microsoft 365 security posture review, Microsoft Azure and Entra ID, Kubernetes/k3s (RBAC, network policies, pod security standards)
Networking & Communication Technologies: Network segmentation (VLANs, DMZ, monitoring/SPAN ports, firewall zoning), TCP/IP, DNS, HTTP, network traffic analysis, intrusion detection and prevention (IDS/IPS) concepts (Cisco CyberOps Associate)
Identity & Access Management: Identity and Access Management (IAM), Microsoft Entra ID administration, RBAC, least privilege, MFA, SSO, conditional access, joiner-mover-leaver access reviews, privileged access concepts, non-human identity (NHI) governance, bounded delegation (RFC 8693)
Governance, Risk & Compliance: governance, risk and compliance (GRC): ISO 27001, NIST CSF, BSI IT-Grundschutz, GDPR, NIS2, DORA, policy & procedure documentation, risk assessment & registers, controls monitoring, audit support, regulatory & compliance training
Programming & Secure Development: Python (detection scripting, REST API integration, anomaly detection), Bash shell scripting, PowerShell, workflow automation, secure development practices (input validation, secrets handling, static analysis with Bandit, dependency scanning with pip-audit), AI-driven alert triage and risk scoring, Generative AI tools (ChatGPT, Claude, Microsoft Copilot)
Tools: Microsoft 365 (Excel, PowerPoint, Word, SharePoint, Teams), Power BI, SQL, ticketing and service management tools, audit management and control testing support
Regulation & AI Governance (dissertation and coursework): EU AI Act, ISO/IEC 42001 and ISO/IEC 38507 (AI governance), NIST SP 800-53 Rev. 5, SOC 2 Trust Services Criteria, Information Systems coursework

Projects

Bounded Agent Delegation: MSc Dissertation Implementation | *Python, PyJWT, OAuth 2.0 Token Exchange (RFC 8693), Docker Compose, pytest, Sigma, MITRE ATT&CK*
- Rebuilt the UNC6395 Salesloft Drift kill chain as five services (identity provider, token broker, two resource servers, log sink); an RFC 8693 bounded token stopped it at the delegation step, where the baseline harvested two secrets.
- Ran an ablation across all 16 combinations of four token properties (least scope, audience pinning, short lifetime, actor claim) and found least scope to be the load-bearing control: disabling it alone restores the full chain.
- Published the code atgithub.com/darshan2209/bounded-agent-delegationwith 20 passing pytest tests, a Sigma detection rule and a 41-claim source verification log an examiner can re-check row by row.

Detection Engineering Lab: Zeek, Apache Kafka, Wazuh/OpenSearch, MISP | *Zeek, Apache Kafka, Wazuh, OpenSearch, MISP, Ubuntu Server*
- Deployed Zeek as a network sensor on Ubuntu and streamed its connection, DNS and HTTP logs through an Apache Kafka topic into a Wazuh/OpenSearch indexer, decoupling collection from indexing so a slow consumer stops dropping events.
- Authored 12 custom detection rules covering SSH brute force, suspicious outbound DNS and unauthorised file modification, then tuned the rules against replayed attack traffic to cut noisy repeat alerts.
- Onboarded Windows and Linux endpoints for centralised log collection; File Integrity Monitoring surfaced 100+ unauthorised file changes, triaged from a single dashboard.
- Scripted indicator-of-compromise ingestion into detection logic over the MISP REST API, so new IoCs enrich alerts without manual re-entry.

Linux Hardening Lab: CIS Benchmark Baseline | *Ubuntu Server, Bash, auditd, Lynis, CIS Benchmark*
- Hardened an Ubuntu Server baseline against the CIS Benchmark: key-only SSH, PAM password policy, kernel sysctl parameters, service minimisation and host firewall rules.
- Wrote a Bash script that applies and re-verifies the whole baseline on a fresh host, turning a manual checklist into a repeatable run measured by Lynis before and after.
- Configured auditd rules for privileged command execution and sensitive file access, forwarding audit events into the detection pipeline above so host changes became alertable.

Multi-Cloud Security Posture Lab: AWS, Google Cloud Platform, Oracle Cloud | *AWS (IAM, CloudTrail, GuardDuty, S3), Google Cloud Platform, Oracle Cloud, Google Workspace, Microsoft 365, boto3*

- Built a deliberately misconfigured AWS account (over-permissive IAM policies, public S3 bucket, logging disabled) and remediated each finding back to least privilege.
- Enabled CloudTrail and GuardDuty, then traced every detection back to the specific misconfiguration that produced it, documenting the finding-to-cause path.
- Repeated the review on Google Cloud Platform and Oracle Cloud: enabled audit logging on both, examined IAM bindings and policies, and corrected the over-permissive service accounts each one surfaced.
- Scripted an IAM audit with boto3 that flags wildcard permissions and unused credentials across the account.

Kubernetes Security Lab: k3s | *k3s, kubectl, RBAC, NetworkPolicy, pod security standards, Calico*
- Secured a k3s cluster by scoping RBAC roles to least privilege, restricting east-west traffic with namespace network policies, and enforcing pod security standards.
- Deployed an intentionally vulnerable workload and reconstructed its behaviour from cluster audit logs, documenting which controls caught it and which did not.

AI-Assisted Monitoring & Automation | *Python, AI Platform API, REST API*
- Engineered an AI-assisted workflow that monitored simulated activity and flagged suspicious events using a Python anomaly-detection script.
- Integrated an AI platform via API to automatically triage flags, score risk and map cases to playbook logic, producing response recommendations for human approval.

Network Segmentation & Secure Tooling | *VLANs, DMZ, SPAN port, nftables, Python, Bandit, pip-audit*
- Designed the segmented network the detection lab runs on: management, endpoint and DMZ VLANs, the sensor on a mirror port, and firewall zone rules between the segments.
- Applied secure development practice across the tooling with input validation, environment-held credentials, static analysis and dependency scanning.

Speaking & Publications

• Selected speaker, KuppingerCole AIdentity & Non-Human Identity Impact Day, Munich, 6 October 2026: 'A Reproducible GRC-to-ATT&CK Gap Analysis of Non-Human and AI-Agent Identity'. Scores eight security and AI-governance instruments on a reproducible rubric, maps each gap to the MITRE ATT&CK technique it leaves exploitable, and proposes bounded-delegation control language built on RFC 8693 token exchange, with an amendment route per instrument.
• Panellist, 'Machines Now Outnumber Humans - Is IAM Ready?', KuppingerCole AIdentity & Non-Human Identity Impact Day, Munich, 6 October 2026, alongside Grace Rachmany (Executive Director, Decentralized Identity Foundation), moderated by KuppingerCole analyst Nitish Deshpande.
• MSc dissertation, 'From Silent Controls to Exploitable Paths: A Structured Gap Analysis of Non-Human Identity Governance Across Eight Security and AI-Governance Instruments, with Experimental Validation'. Corpus: SOC 2, NIST CSF 2.0, ISO/IEC 27001:2022, NIST SP 800-53 Rev. 5, DORA, BSIG Section 30, ISO/IEC 42001 and ISO/IEC 38507. Finds the two SP 800-53 controls closest to the non-human case, IA-9 and IA-13, in no mandatory baseline.

Certifications

• Microsoft SC-900 Security, Compliance and Identity Fundamentals
• ISO/IEC 27001 Information Security Associate (Skillfront)
• Cisco CyberOps Associate
• Google Cybersecurity Certificate (Coursera)
• Certified Threat Intelligence & Governance Analyst (CTIGA), Red Team Leaders
• TryHackMe Sec1
• Microsoft SC-200 Security Operations Analyst (in progress)

Additional

Languages: English (C1), German (A2)
Communities: Member, Microsoft Entra Advisors (Microsoft Security private community, NDA): collaborate with Microsoft identity engineering on Entra private previews and feature feedback
Volunteering: Cybercrime Volunteer, State Cyber Cell: helped people scammed online report the case and know what to do next. Cybersecurity Lead, GDSC Club: ran student security workshops
Awards: Aspire Leadership Program (2024); L'Oréal BOOST Scholarship (2023)
