Work-authorised, no sponsorship required | Open to relocation | Full-time from Oct 2026

Summary

Information Technology graduate (B.Tech, GPA 8.76/10) completing a Business Management & Cyber Security MSc in September 2026. Works hands-on with the open-source detection and response stack: Zeek sensors and endpoint agents streaming through Apache Kafka into a Wazuh/OpenSearch indexer, enriched with MISP threat intelligence and automated in Python. Hardened Ubuntu servers against the CIS Benchmark, secured a k3s cluster with RBAC and network policies, and reviewed security posture across AWS, Google Cloud Platform and Oracle Cloud. Microsoft certified across security operations (SC-200), identity (SC-300) and security/compliance fundamentals (SC-900). Trained 4,500+ people on acceptable-use and access-control requirements with 95% certification, monitored activity across 50+ platforms, and authored control documentation mapped to ISO 27001, BSI IT-Grundschutz and NIS2. Speaking on non-human identity governance at KuppingerCole's NHI Impact Day, Munich, October 2026. English C1, German A2.

Experience

Cybersecurity Trainer

Apr 2025 – Oct 2025

NIIT Foundation

Ahmedabad, India

- Delivered compliance and policy training to 4500+ students on acceptable-use and access-control requirements, with 95% achieving certification, building day-to-day adherence to governance and Code-of-Conduct-style policies.
- Maintained policy, training and controls documentation in the LMS, keeping records current and audit-ready for review.
- Developed awareness content mapped to ISO 27001 and NIST CSF, enabling non-specialist staff to apply governance requirements in daily work.
- Reinforced identity & access fundamentals (RBAC, least privilege and MFA) to reduce policy and access-control exceptions.

Cybersecurity Research Analyst

Dec 2023 – Mar 2024

The CyberDiplomat

Bengaluru, India

- Monitored activity across 50+ platforms, performing checks and assessments of flags and alerts and escalating policy and access exceptions for review.
- Tracked each remediation item to closure on schedule and documented outcomes and follow-up communication.
- Supported case documentation and ongoing team projects, and tested new tools to improve process efficiency and digitalisation.

Cybersecurity Research Intern

Jul 2023 – Oct 2023

The CyberDiplomat

Bengaluru, India

- Conducted security research across 50+ cryptocurrency platforms and threat landscapes, improving the quality of threat-intelligence and risk-analysis deliverables by 30%.
- Built the research and documentation groundwork that led to the analyst role two months after the internship ended.

Education

GISMA University of Applied Sciences

Sep 2025 – Expected Sep 2026

MSc, Business Management & Cyber Security

Potsdam, Germany

- Thesis on non-human identity governance, accepted as a conference talk (see Speaking & Publications).

Swarnim Startup and Innovation University

Aug 2020 – Jun 2024

B.Tech, Information Technology

Gandhinagar, India

- GPA 8.76/10 (German equivalent 1.6).
- Computer Science core coursework: operating systems, computer networks, database systems, programming, information security.

Skills

Security Operations & Incident Detection: Zeek, Apache Kafka, Wazuh/OpenSearch, MISP, detection rule authoring and tuning, file integrity monitoring, log pipeline design, SIEM alert triage, incident documentation, remediation tracking, MITRE ATT&CK, Microsoft Sentinel and Defender XDR (SC-200), KQL

Operating Systems & Systems Administration: Linux/UNIX (Ubuntu, Debian) administration and maintenance, CIS Benchmark hardening, auditd, SSH and PAM configuration, systemd services, virtualisation (VirtualBox, KVM), databases (SQL)

Cloud Services Security & Containers: AWS (IAM, CloudTrail, GuardDuty, S3 bucket policy), Google Cloud Platform, Oracle Cloud, Google Workspace and Microsoft 365 security posture review, Microsoft Azure and Entra ID, Kubernetes/k3s (RBAC, network policies, pod security standards)

Networking & Communication Technologies: Network segmentation (VLANs, DMZ, monitoring/SPAN ports, firewall zoning), TCP/IP, DNS, HTTP, network traffic analysis, IDS/IPS concepts (Cisco CyberOps Associate)

Identity & Access Management: Microsoft Entra ID administration (SC-300), RBAC, least privilege, MFA, SSO, conditional access, joiner-mover-leaver access reviews, privileged access concepts, non-human identity (NHI) governance, bounded delegation (RFC 8693)

Governance, Risk & Compliance: ISO 27001, NIST CSF, BSI IT-Grundschutz, GDPR, NIS2, DORA, policy & procedure documentation, risk assessment & registers, controls monitoring, audit support, regulatory & compliance training

Programming & Secure Development: Python (detection scripting, REST API integration, anomaly detection), Bash shell scripting, PowerShell, workflow automation, secure development practices (input validation, secrets handling, static analysis with Bandit, dependency scanning with pip-audit), AI-driven alert triage and risk scoring, Generative AI

tools (ChatGPT, Claude, Microsoft Copilot)

Tools: MS Excel, MS PowerPoint, MS Office, Power BI, SQL

Projects

Detection Engineering Lab: Zeek, Apache Kafka, Wazuh/OpenSearch, MISP | *Zeek, Apache Kafka, Wazuh, OpenSearch, MISP, Ubuntu Server*

- Deployed Zeek as a network sensor on Ubuntu and streamed its connection, DNS and HTTP logs through an Apache Kafka topic into a Wazuh/OpenSearch indexer, decoupling collection from indexing so a slow consumer stops dropping events.
- Authored 12 custom detection rules covering SSH brute force, suspicious outbound DNS and unauthorised file modification, then tuned them against replayed attack traffic to cut noisy repeat alerts.
- Onboarded Windows and Linux endpoints for centralised log collection; File Integrity Monitoring surfaced 100+ unauthorised file changes, triaged from a single dashboard.
- Scripted indicator-of-compromise ingestion into detection logic over the MISP REST API, so new IoCs enrich alerts without manual re-entry.

Linux Hardening Lab: CIS Benchmark Baseline | *Ubuntu Server, Bash, auditd, Lynis, CIS Benchmark*

- Hardened an Ubuntu Server baseline against the CIS Benchmark: key-only SSH, PAM password policy, kernel sysctl parameters, service minimisation and host firewall rules.
- Wrote a Bash script that applies and re-verifies the whole baseline on a fresh host, turning a manual checklist into a repeatable run measured by Lynis before and after.
- Configured auditd rules for privileged command execution and sensitive file access, forwarding audit events into the detection pipeline above so host changes became alertable.

Multi-Cloud Security Posture Lab: AWS, Google Cloud Platform, Oracle Cloud | *AWS (IAM, CloudTrail, GuardDuty, S3), Google Cloud Platform, Oracle Cloud, Google Workspace, Microsoft 365, boto3*

- Built a deliberately misconfigured AWS account (over-permissive IAM policies, public S3 bucket, logging disabled) and remediated each finding back to least privilege.
- Enabled CloudTrail and GuardDuty, then traced every detection back to the specific misconfiguration that produced it, documenting the finding-to-cause path.
- Repeated the review on Google Cloud Platform and Oracle Cloud: enabled audit logging on both, examined IAM bindings and policies, and corrected the over-permissive service accounts each one surfaced.
- Scripted an IAM audit with boto3 that flags wildcard permissions and unused credentials across the account.

Kubernetes Security Lab: k3s | *k3s, kubectl, RBAC, NetworkPolicy, pod security standards, Calico*

- Secured a k3s cluster by scoping RBAC roles to least privilege, restricting east-west traffic with namespace network policies, and enforcing pod security standards.
- Deployed an intentionally vulnerable workload and reconstructed its behaviour from cluster audit logs, documenting which controls caught it and which did not.

AI-Assisted Monitoring & Automation | *Python, AI Platform API, REST API*

- Engineered an AI-assisted workflow that monitored simulated activity and flagged suspicious events using a Python anomaly-detection script.
- Integrated an AI platform via API to automatically triage flags, score risk and map cases to playbook logic, producing response recommendations for human approval as a model for AI-driven process enhancement.

Network Segmentation & Secure Tooling | *VLANs, DMZ, SPAN port, nftables, Python, Bandit, pip-audit*

- Designed the segmented network the detection lab runs on: management, endpoint and DMZ VLANs, the sensor on a mirror port, and firewall zone rules between them.
- Applied secure development practice across the tooling with input validation, environment-held credentials, static analysis and dependency scanning.

Speaking & Publications

- Selected speaker, KuppingerCole NHI Impact Day, Munich, 14 October 2026. Talk on non-human identity governance: a structured gap analysis across five GRC frameworks (SOC 2, NIST CSF 2.0, ISO 27001:2022, NIST SP 800-53 R5, DORA), showing that agentic delegation is unaddressed in all five, with an RFC 8693 bounded-delegation proof of concept that breaks the attack chain.
- MSc thesis, 'From Silent Controls to Exploitable Paths: A Structured Gap Analysis of Non-Human Identity Governance Across Five GRC Frameworks with Adversarial Validation'. 98 pages, 15 figures; UNC6395 kill chain mapped to MITRE ATT&CK.

Certifications

- Microsoft SC-300 Identity and Access Administrator Associate
- Microsoft SC-200 Security Operations Analyst Associate
- Microsoft SC-900 Security, Compliance and Identity Fundamentals
- ISO/IEC 27001 Information Security Associate (Skillfront)
- Cisco CyberOps Associate
- Google Cybersecurity Certificate (Coursera)
- Certified Threat Intelligence & Governance Analyst (CTIGA), Red Team Leaders
- TryHackMe Sec1
- CompTIA Security+ SY0-701 (in progress)

Additional

Languages: English (C1), German (A2)

Involvement: Cybercrime Volunteer, State Cyber Cell; Cybersecurity Lead, GDSC Club

Awards: Aspire Leadership Program (2024); L'Oréal BOOST Scholarship (2023)
